

### SPORTS FACILITIES: New PalaNet and new Palabassano

The new multipurpose plant of Bassano del Grappa (VI) and the Palanet of Padua are the latest sport stadiums of Padua inaugurated with Bericoplast seats.

More than 5000 seats KUM model (made of polyamide 6) are used worldwide in different sports seating areas (ideal also for the outside) fixed directly on the footstep by means of three direct anchors. Comfort and safety are the distinctive features of this seat (the back is 33 cm, the depth of the seat is 40 cm).

In both facilities, the seats have been manufactured in white and red, but Bericoplast may meet the most different needs as regards colours customization. All Bericoplast seats meet the different safety needs (EN 12727/2000 certifications, CATAS for Italy and GS issued by the LGA German certification body).

Bericoplast manufactures more than 450,000 items per year with a completely Italian chain of production.

### NEW PRODUCTS: Vale, the versatile chair

"Vale is the new chair for community".

Versatile and funny, Vale backrest and seat are made with the injection molding technique, while the frame is made of chrome-plated steel wire providing elasticity and very high resistance to stress. In the version with armrests, these blend into the frame silhouette in a refined game of clean and essential lines.

Vale is made with or without armrests and in the variants with tablet.

Vale, made in the basic colors of white and anthracite, is easy to stack up to 30 units.

Vale meets all the safety needs (EN 15373/2007 and EN 1728/2000 certifications) and it has achieved the fire resistance certification for class 1C.
